NIKE PARTNERS - PRODUCT INFORMATION FEED

Last Updated: 03/09/2020

Nike's Product Information Feed (PIF) pushes Nike product information to partners. The PIF can be pushed on demand or on a scheduled basis.

Introduction

The PIF supplies information that partners need in order to sell Nike products to consumers through their ecommerce apps and experiences. Nike works closely with their partners to define a contract specifying the product data, data format, how often the partner needs the feed, and where to deliver it. Nike then sets up a configuration that customizes the feed to suit each partner's needs.

Let's take a look at some quick facts about the PIF.

Table 1: Product Information Feed At a Glance

Partner Types	Retail (e.g. Nordstrom), Consumer (e.g. Google, Facebook)
Countries	United States
Languages	English
Currencies	US dollars
Sizing	US
Delivery Method	Push of eligible products

Product Information Feed Types

There are two types of PIFs, one for Retail Partners and one for Consumer Partners. The table below lists the key differences between the two feeds.

NIKE PARTNERS - PRODUCT INFORMATION FEED

Table 2: Retail Partner Feed vs. Consumer Partner Feed

	Retail Partner	Consumer Partner
Products included	US line futures	Entire US product line
Source of product data	Nike selects futures products for a particular retail partner (store) and season via the Nike Offerings API	Monarch (style-color), Prodigy (copy, description, price, taxonomy), Asset Delivery (image and video)
Prices included	Wholesale and MSRP	MSRP
Inventory	No inventory	Has inventory and products are saleable immediately
How partner uses the feed	As a catalog of Nike futures products for an upcoming season to help in their ordering process	To populate their ecommerce store with Nike Products and sell them to consumers
Season of products included	Includes products 6 months ahead of current season	Products are not season-specific

Now let's dig a little deeper into how the PIF works for each type of partner.

Retail Partner Product Information Feed

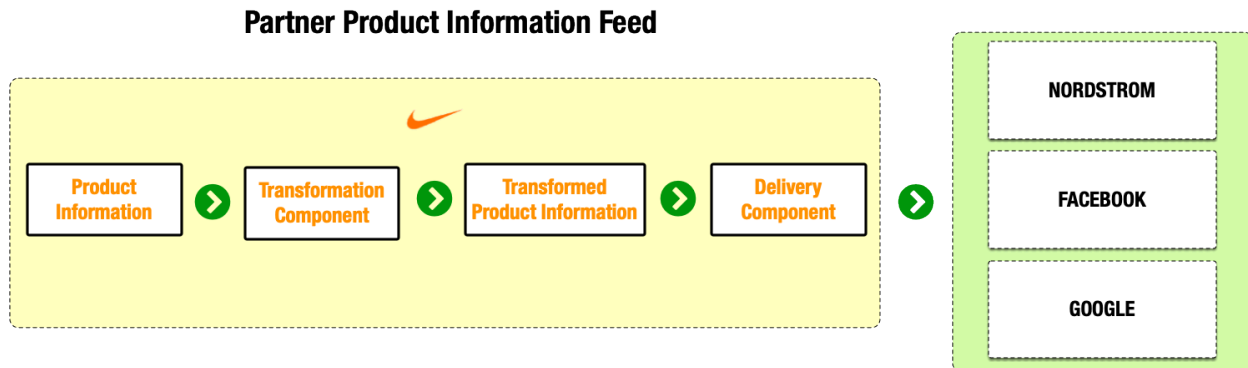

The Retail Partner PIF contains products curated specifically for the retailer. Partners use the feed as a catalog from which to purchase Nike product for a future season.

The Retail Partner PIF products are “futures”, meaning they will be available to the retail partner to sell to their consumers 6 months in the future. Since these products will be manufactured in the future, they have no inventory.

Consumer Partner Product Information Feed

The Consumer PIF contains Nike products that have inventory and are available for sale immediately. Unlike the futures products in the Retail Partner PIF, there is no season associated with the consumer partner PIF products.

How does the Product Information Feed Work?

The PIF is made up of the Transformation component and the Delivery component.

Transformation Component

The transformation component ensures that the product data conforms to the partner's PIF contract. This may include renaming and restructuring data so it is arranged the way the partner expects. For instance, the transformation component may need to change the attribute name from `styleNumber` in the source data to `STYLE NUMBER` in the PIF per the partner contract.

Delivery Component

The delivery component is responsible for getting the transformed data to the partner in the agreed format at the expected time. The delivery component is flexible in how it performs both.

The delivery time and frequency of the PIF is configurable. Typically, it is pushed on a daily basis. The PIF can also be pushed on demand.

The delivery component can push the PIF to partners in several ways. It can call partner APIs, push files to AWS S3 buckets and push files using SSH File Transfer Protocol (sFTP). It can also create PIFs in several file formats such as Comma-Separated Value (CSV) or Javascript Object Notation (JSON) format.

TIP: Currently, the PIF cannot deliver product updates made since the last time it ran. All eligible products are included in the PIF each time.

Sample Product Information Feed Attributes

NIKE PARTNERS - PRODUCT INFORMATION FEED

The PIF attributes vary according to partner contract. The table below lists some sample attributes.

Table 3: Sample Product Information Feed Attributes

Attribute Name	Description	Example
Style Number	Nike style number	315122
Color Number	Nike color number	111
Style Name	Name of style	Nike Air Force 1 '07
Description	Description of style-color	Hoops in the park, Sunday BBQs and sunshine. The radiance lives on in the Nike Air Force 1 '07, the b-ball OG that puts a fresh spin on what you know best: crisp leather in an all-white colorway for a statement look on and off the court.
Size	Size of SKU	M 6/W 7.5
Price	Price of SKU	90
GTIN	Global Trade Item Number of SKU	00091205776746
