

TAXONOMY TAGGING FOR ASSETS AND CONTENT - DRAFT

Learn how to use [Taxonomy Tagging for Assets and Content](#) in your experience to display personalized assets and content to Nike consumers.

Increase conversion with a personalized experience using Taxonomy Tagging for Assets and Content

When you make a consumer feel at home in your experience, the more time they will engage, and if your experience offers eCommerce, the more likely they will purchase Nike product. Taxonomy Tagging for Assets and Content (TTAC) allows you to easily tag content and images from various sources with pre-defined taxonomy attributes. Your experience can use these tags to dynamically show consumers personalized navigation, content, and images in their preferred language that reflect their style, interests, and preferences.

Use Cases

Step through the use cases below to add TTAC to your experience.

- ✓ Tag images so you can determine which image qualities and sizes motivate consumers to purchase.
- ✓ Display images that accurately reflect the navigational path taken by the consumer with taxonomy tagging.
- ✓ Boost conversion by using taxonomy tagging to display images to consumers that resonate with their interests and preferences.
- ✓ Tag content to allow your app to select the most relevant threads to display to the consumer.
