Podium Consumer Overview

What is it?

Nike's Podium Consumer provides a scalable, flexible and responsive toolset that is used to standardize the look, feel and functionality of UI elements across Nike experiences. Podium Consumer achieves this by offering a comprehensive set of system (UI) components, design tokens and icons. It is recommended that all Nike commerce desktop and mobile web experiences adopt Podium Consumer.

Podium Consumer components are used to create simple or complex UI elements such as carousels, buttons and images. Components may contain one or more configurable `props` that represent HTML attributes.

Podium Consumer design tokens represent style values. For example, the web color token named `colorContentPrimary` represents the hex color value `#111111`. Design tokens are used by components behind-the-scenes, but you can also use them directly to override and customize style components.

Podium Consumer icons are available as React components through the `@nike/nike-design-system-icons` library. You can find a complete list of icons in both [Figma](#) and the [Podium Consumer Storybook](#). If you can not find the icon you need, [request a new icon](#).

Can Podium Consumer be used with Web Shell?

Yes! The Podium Consumer component and design token libraries are automatically accessible in [Web Shell](#) with no special configuration necessary. In order to use the icon library in your Web Shell project, you need add `@nike/nike-design-system-icons` to your Web Shell project manually.

The code script below sets the Podium Consumer button component using the design token `borderRadius` with a border width of value `buttonBorderRadiusS`.

```
import React from "react";
import { ButtonStyled, useTokens } from "@nike/nike-design-system-components";

export default function HomePage() {
  const { buttonBorderRadiusS } = useTokens();
  return (
    <div style= {{ borderRadius: buttonBorderRadiusS }} >
      <ButtonStyled>Click Me!</ButtonStyled>
    </div>
  );
}
```

[Podium Consumer Storybook](#)

Podium Consumer Storybook is a detailed guide to using the Podium Consumer component library with cut-and-paste code examples (including Beta). It also covers the design token library, icon library, v0 to v1 migration, hooks, and how to profile React components.

[Podium Component Demos](#)

Experience how the Podium Consumer component library can be used to create feature-rich functionality such as product carousels, modals, dropdowns and form validation on this live demo site.
