

[Merch%20Taxonomy%20Attributes%20V1?tab=api](#)) service. TTAC connects these tools to front-end web experiences through TTAC components and the TTAC metadata (Attributions) service. TTAC components enable Nike experiences to tag content threads and assets with taxonomy attributes through a user interface. The TTAC metadata service stores and retrieves those taxonomical relationships in the form of UUIDs.

Contacting the Team

Slack	#asset-delivery (https://nikedigital.slack.com/messages/C20935610)
Confluence	CiC Asset Delivery (https://confluence.nike.com/display/CICAD/CiC+Asset+Delivery)
Product Director	Chris Sparhawk

About TTAC

The project is in development in PI-26 and is scheduled for release February 2019.

API	TTAC Metadata Service (https://developer.niketech.com/docs/projects/attributions?tab=api)
COMPONENTS	to be published 2/5/19

The TTAC Service and Components are inner-sourced within Nike and open to contributions from all development teams to submit design suggestions and code PRs.

Governance will be provided by the following team:

- Architecture: Aaron Hall
- Engineering: Edmund Adjei
- Taxonomy: Rebecca Roberts

Use Cases

Step through the TTAC use cases below.

- ✓ Tag images so you can determine which image qualities and sizes motivate customers.
- ✓ Improve engagement by displaying product images most relevant to the customer's navigational path to a product wall. e.g. if a customer navigates to unisex products via a women's navigational path, she prefers to see images of female models instead of male.
- ✓ Boost conversion by using taxonomy tagging to display images to customers that resonate with their interests and preferences.
- ✓ Tag content to allow your app to select the most relevant threads to display to the customer.
