USING CHANNELED PRODUCTS

DRAFT

Last Updated: 01/31/2020

Use the Channeled Products API to **get product data that is segmented by channel, marketplace, and channel type** into your app.

TIP: Migrating from Merch Products/SKUs? See also the [Channeled Products Migration Guide](#).

Introduction

What are Channeled Products?

The Channeled Products API provides Nike product data that is segmented by channel, marketplace, and channel type (see [Key Concepts & Terms](#). This helps you get the right set of product data delivered to the app, experience or store where they are to be sold.

(Insert diagram showing channel, marketplace, channel type intersecting, along with an example of what a combination of those would look like IRL)

NOTE: Product pricing and content data are NOT available from Channeled Products. See [some other thing](#) for more.

What Product Data is Available?

The Channeled Products API response contains one or more Nike products, each having attributes like:

Product Code Style Code Color Code Product Type Colors Sizes Consumer Taxonomy Attributes Lifecycle Management Marketplace Channel Type Consumer Channel Id

(Replace above list with a picture showing the types of data and how they can be used. Group as necessary to simplify diagram.)

Key Concepts & Terms

Channel, Marketplace, and Channel Type

- **Channel:** a specific intersection of product, services and environment, whether digital or physical retail. Identified uniquely by a UUID. Example: Nike.com, Nike App, SNKRS.
- **Marketplace:** a universally-defined location where goods are bought and sold, e.g. geo-political countries. Example: “US”.
- **Channel Type:** types of retailers based on the target consumer, retail format and business model. Example: “Digital”.

(Give an example of what an intersection of these three things looks like)

Building a Product Data Set Requires Calling Other APIs

(Enumerate here, or link to below, the additional APIs that can be called to build out the product data set further)

Terms

Here are other key terms used in this document.

Table 1: Key Terms

Term	Definition
Product Code	The combination of Nike style code and color code. Example: 654321-001
Style Code	The Nike style code. Example: 654321
Color Code	The Nike color code. Example: 001
Product Type	
Consumer Taxonomy Attribute	
Lifecycle Management	
GTIN	The global trade identifier number, unique to a style, color, and size combination.

Term	Definition
	Example: 00867350300861

Get Channeled Products by Product Code or GTIN

✓ Get a list of Channeled Products

Legacy use cases:

- ✓ List merchandised product information such as product state, gender, merchandising tags, product type, and launch dates for a list of style-colors
- ✓ List the sizes and SKU detail such as Nike size, localized size description, value-added tax (VAT) and Commodity Code for a style-color

Step 1: Execute the Request

To get a list of Channeled Products, execute a GET request like:

```
curl --location --request GET 'https://api.nike.com/product_catalog/
channeled_products/v1/?filter=productCodes%28654321-001%29'
```

Customizing Your Results

Customize your results by including URL query parameters in the request, as follows:

- The required `filter` query parameter must contain either a list of `productCodes()` or `gtins()` with comma-separated values, like `?filter=productCodes(654321-001,123456-701,...)`
- The optional `fields` query parameter allows you to specify by name which fields that you want in the response, like `?fields=productCode,styleCode,...`

Step 2: Enrich Product Data Set via Other APIs

Optionally, you can build out your product data set even further. Use the data from the Channeled Products response to execute additional API requests, as follows:

Table 2: Usage of Fields in API Response

Field	Data Type	Example	Description	Us
id	string	8f413333-0be7-4f09-a378-f85c8cf7d080	Identifier for a given record	
marketplace	string	US	A specific marketplace/ country.	
channelType	string	Digital	Nike channel type	
consumerChannelId	string	89ddb38a-fd6e-4053-a2ba-1ad7ffec802e	Consumer channel experience identifier	
globalProductId	string	63455a28-7a07-45d6-a430-af56b6132c0f	UUID of Global product	
productCode	string	654321-001	Nike style-color code	
styleCode	string	654321	Nike style code	
colorCode	string	001	Nike color code	
productType	string	InlineProduct	Nike product type	
lifecycleManagement.consumerStartDate	string	2019-07-01T08:00:00.000Z	ISO formatted timestamp	
lifecycleManagement.comingSoonEndDate	string	2019-07-14T08:00:00.000Z	ISO formatted timestamp	
lifecycleManagement.evergreenStartDate	string	2020-09-01T15:14:00.000Z	ISO formatted	

Using Channeled Products DRAFT

Field	Data Type	Example	Description	Us
			timestamp	
lifecycleManagement.disabledStartDate	string	null	ISO formatted timestamp	
lifecycleManagement.isPreOrderable	boolean	true	If true, product can be pre-ordered	
lifecycleManagement.isProductAttributionComplete	boolean	false	If true, product attribution has completed	
colors.simpleColorId	string		UUID of simple color	Ca ser det
colors.primaryColorId	string		UUID of primary color	Ca ser det
colors.secondaryColorId	string		UUID of secondary color	Ca ser det
colors.tertiaryColorId	string		UUID of tertiary color	Ca ser det
colors.logoColorId	string		UUID of logo color	Ca ser det
consumerTaxonomyAttributelds	string			Ca ser det
sizes.id	string	e1045a42-2241-5893-a161-8a2e83983b7b		Ca siz

Field	Data Type	Example	Description	Us
				v1 to
sizes.gtin	string	00867350300861	Global trade item number	Ca siz v1 to
sizes.sizeConversionId	string	0f4d7354-c33b-4e4d-b436-29ea727c14ce	UUID of size conversion	Ca siz v1 to
sizeChartId	string		UUID of size chart	Ca to def

API Endpoint Quick Reference

- **Channeled Product** (<https://developer.niketech.com/docs/projects/Channeled%20Products%20V1?tab=api>)
- **Channeled Products** (<https://developer.niketech.com/docs/projects/Channeled%20Products%20V1?tab=api>)

Best Practices

Listed below are some best practices for working with {}.

Conditions for Retries

For all Nike Cloud APIs, the general rule is that HTTP 4XX error codes (except for 429) should not be retried but HTTP 5XX errors can be retried. For general information on Nike error retry practices, see [API Error Patterns \(https://confluence.nike.com/display/NEA/API+Standards#APIStandards-Errors \)](https://confluence.nike.com/display/NEA/API+Standards#APIStandards-Errors) on Confluence.

Test Environment

It is recommended to test all endpoints in the production environment as opposed to the test environment. Using the test environment can have unpredictable results due to the many downstream services which these endpoints are reliant upon in order to provide typical 'production-like' responses.

There are boundaries for testing in production:

- Performance tests at high volumes should never be done in production. All performance tests should be done in test.

Caching Data

Describe what is cached and for how long, or if caching is not supported.

Troubleshooting

- Use the general troubleshooting tips in the [Using Nike APIs \(https://developer.nike.com/nde-docs/doc/getting-started/using-nike-apis.html#troubleshooting \)](https://developer.nike.com/nde-docs/doc/getting-started/using-nike-apis.html#troubleshooting) guide.
- Use a Splunk query (requires access) to check for issues with your request.
- Contact the {} team on the [#slack-channel](#) Slack channel for assistance.

Terms of Service

Authorization

Access Tokens

Most calls through the Nike API gateway (api.nike.com) require an access token be sent in the request header. This allows Nike to verify that your app is authorized to perform the action on behalf of the user.

Access tokens are obtained by calling Nike Unite services prior to calling the API which you ultimately want to reach.

To find out more on how to call Unite services to obtain access tokens, see the Authorization section of the [Using Nike APIs \(https://developer.niketech.com/nde-docs/doc/getting-started/using-nike-apis.html#authorization \)](https://developer.niketech.com/nde-docs/doc/getting-started/using-nike-apis.html#authorization) guide.

JSON Web Token

{Does this thing require JWT?}

For more, see the JWT section of [Using Nike APIs \(https://developer.niketech.com/nde-docs/doc/getting-started/using-nike-apis.html#jwt-json-web-token \)](https://developer.niketech.com/nde-docs/doc/getting-started/using-nike-apis.html#jwt-json-web-token).

Sample Requests

Sample requests included throughout this guide contain unique IDs and access tokens that are spent/expired in the Production environment, so you will not be able use them as-is for testing purposes. Reuse what you can and replace with valid IDs/access tokens when necessary.

Required Request Headers

Listed below are the required request headers. Since most requests come through the Nike Edge router, these header values will be set automatically, provided your app experience calls the Unite services first to get an access token and passes that token in the request.

Header Name	Description
Header1	

TIP: For the Authorization header, use the token for the consumer's login session that you obtained from Nike Unite/Identity, prefixed by ****Bearer **** (note the single space after Bearer). This is necessary for Nike to verify that your app is authorized to perform the requested operation on behalf of the consumer.

Common Questions

Question 1

Answer 1

Contacting the Team

Need to contact the {} team?

Slack	
Confluence Space	
Team Contacts	Person1 (Person1 email)
