ADDING FULFILLMENT OFFERINGS TO YOUR EXPERIENCE

Last Updated: 12/02/2019

Use **Fulfillment Offerings** in a checkout experience to show consumers the best options for getting their purchases, wherever they are.

TIPS:

- Before using this guide, read **Using Nike APIs** (<https://developer.niketech.com/nde-docs/doc/getting-started/using-nike-apis.html>) and **Cart & Checkout Overview** (<https://developer.niketech.com/nde-docs/doc/commerce/checkout/overview-checkout.html>).
- Use this guide as a supplement to the API Reference for detailed use cases. See **API Quick Reference** for links to all the API Reference docs discussed here.
- The steps involving **Payment** are covered in **Adding Payment to Your Experience** (<https://developer.niketech.com/nde-docs/doc/commerce/payment/use-payment.html>).

Introduction

In a checkout experience, consumers are accustomed to selecting a shipping method (e.g. “Two-Day”) while being shown the associated costs and estimated delivery dates.

But what if you want to show them additional options, like a list of nearby stores or other locations where they can pick up their order?

Fulfillment Offerings gives you all you need to drive an interactive ‘Shipping’ selection experience like the one shown here:

CHECKOUT

What are Fulfillment Offerings?

Fulfillment Offerings are a **set of price offers that a consumer has for receiving the items in their cart**, as determined by the [Fulfillment Offerings API \(https://developer.nike.com/docs/projects/Fulfillment%20Offerings?tab=api \)](https://developer.nike.com/docs/projects/Fulfillment%20Offerings?tab=api).

Offerings can vary at any moment in time based upon:

- Consumer information
- Delivery destinations (i.e. shipping addresses, store IDs, pickup locations, email addresses, GPS coordinates)
- Items in cart
- Total item prices
- Available discounts/promotions

[Turn this into a diagram (?): Send an API request to get the available offerings and then show them to the consumer. As the consumer selects an offer for each item, send additional API requests in order to dynamically refresh the offerings shown. That way, the consumer can make up their mind quickly and easily.]

TIP: You can also [Search for Offerings Using Consumer Location and Intents](#).

What is BOPIS?

Fulfillment Offerings supports the ‘Buy Online, Pickup In Store’ (BOPIS) scenario. This is where the consumer completes a checkout in the app/web, then travels to a nearby store to pick up their order. See [BOPIS](#) for further details.

Key Terms

Term	Definition
Fulfillment Offering	A set of price offers that a consumer has for fulfilling the items in their cart.
Items	The individual products and services to be fulfilled.
Expiration Date	The date/time after which an offering expires.
Get By	The estimated date (min/max) for the item to be fulfilled.
Fulfillment Group	A grouping of cart items that have the same Fulfillment Type.
Fulfillment Type	The type of offering, one of <code>SHIP</code> , <code>PICKUP</code> , <code>INSTORE</code> , <code>DIGITAL</code>
BOPIS	Acronym for ‘Buy Online, Pickup In Store’
Locations	The types of locations to be considered for a particular offering, e.g. <code>address/shipping</code> or <code>location/search</code>
Store	A Nike store at which the consumer can pick up their order, in the case of BOPIS.
Pickup Location	The third-party location at which the consumer picks up their order.

Term	Definition
Email	The email address to which the products/services are to be fulfilled, e.g. for digital gift cards.
Shipping Address	The postal address to which the products are to be shipped.

Making Your First Request

Let's walk through how to make your first request to the Fulfillment Offerings API, and along the way, define and explain some more concepts.

What Data Do I Need To Provide?

At minimum, the following is required to be sent in the request body:

- `country` code (e.g. US)
- `currency` code (e.g. USD)
- List of `items`, each having:
 - Unique line item `id` (a UUID that you generate)
 - Item `quantity`
 - `locations` (one or more of `address/shipping`, `address/digital`, `location/search`, `store/store_views`, `location/pick_up_locations`)

Optionally, for each item you can send a `fulfillmentType` which describes the consumer's **intended method of fulfillment** for that item (if known).

Possible values for Fulfillment Type

Type	Description	Example Scenario
SHIP	Consumer receives the order at their postal address.	Carrier delivers order to a home address
PICKUP	Consumer picks up the order at a Nike store or third-party pickup location	'Buy Online Pickup In Store' (BOPIS).
INSTORE	Consumer completes self-checkout via mobile while in a retail store	Instant Checkout in the Nike app

Type	Description	Example Scenario
DIGITAL	Consumer receives the order at their digital address	Digital gift card is delivered by email.

KEY CONCEPT: Fulfillment Type, along with Location, describe the consumer's intent(s) for receiving the item. More on [intent](#) later.

TIP: Always check the [Fulfillment Offerings API Reference \(https://developer.nike.com/docs/projects/Fulfillment%20Offerings?tab=api\)](https://developer.nike.com/docs/projects/Fulfillment%20Offerings?tab=api) for the most up-to-date requirements.

Send the Request

OPTION 1: Send a PUT request

Send a HTTP PUT request to https://api.nike.com/buy/fulfillment_offerings_jobs/v1/2c1db6b9-7fd7-401c-acc9-73f926681cb9. Note the UUID in the URL path, which you must generate.

Sample Request Body

ADDING FULFILLMENT OFFERINGS TO YOUR EXPERIENCE

```
{
  "country": "US",
  "currency": "USD",
  "locale": "en_US",
  "items": [
    {
      "id": "2c1db6b9-7fd7-401c-acc9-73f926681cb9",
      "skuId": "935f2623-6010-4da9-a218-571c8e33d7aa",
      "quantity": 1,
      "valueAddedServices": [
        {
          "id": "88d0475d-30e5-4c2f-9a87-7a31938f8ace",
          "instruction": {
            "id": "2027261230",
            "type": "customization/nike_id"
          }
        }
      ]
    },
    {
      "id": "a05dcb8a-79e5-4f69-bc30-213dd93f429c",
      "skuId": "15611769-e81b-45dd-b28c-ca0effb272de",
      "quantity": 1,
      "locations": [
        {
          "type": "address/shipping",
          "postalAddress": {
            "country": "US",
            "address1": "1234 NW Test",
            "city": "Beaverton",
            "state": "OR",
            "postalCode": "97006"
          }
        }
      ]
    }
  ],
  {
    "id": "a05dcb8a-79e5-4f69-bc30-213dd93f429c",
    "skuId": "15611769-e81b-45dd-b28c-ca0effb272de",
    "quantity": 1,
    "locations": [
      {
        "type": "address/shipping",
        "postalAddress": {
          "country": "US",
          "address1": "1234 NW Test",
          "city": "Beaverton",
          "state": "OR",
          "postalCode": "97006"
        }
      }
    ]
  }
}
```

OPTION 2: Send a GET request

In addition to the PUT endpoint mentioned in [Option 1](#), a cache-able GET endpoint is also available. The GET endpoint is intended to be used in scenarios where user data isn't necessary to calculate detailed fulfillment offerings, e.g. in a PDP.

Send a GET request to `https://api.nike.com/buy/fulfillment_offerings/v1{?filter}`.

The `filter` query parameter must be included, with the field/value requirements as follows:

Filter	Required?	Example
Product	Required	<code>?filter=skuId()</code>
Location	Required	<code>?filter=country(US)&filter=postalCode(97123)</code>
Fulfillment Type	Optional	<code>?filter=fulfillmentTypes(SHIP)</code>

Evaluate the Response

The API response includes a list of items. For each item, one or more offerings are included, along with a [Fulfillment Group](#) identifier.

What's in an Offering?

Each offering has the following attributes:

Offering Attributes

Attribute	Description	Example
Fulfillment Type	The type of offering	<code>"type": "SHIP", "type": "PICKUP"</code>
Location	Delivery destinations	postal/email addresses, store IDs, pickup locations, GPS coordinates
'Get By' Date	The estimated date (min/max) for the item to be fulfilled	<code>"dateTime": "2019-02-09T23:59:59.000Z"</code>
Expiration Date	The date on which the offering expires	<code>"offerExpiration": "2019-02-07T00:00:00.000Z"</code>

Attribute	Description	Example
Price	The price of the offering	"total": 8

Fulfillment Groups

The API response also includes an array of `fulfillmentGroups`, include one group for each applicable Fulfillment Type. For example, if there are multiple possibilities for fulfillment type `SHIP`, they will belong to the same Fulfillment Group, while other types of offerings would be in separate groups.

Fulfillment Groups can be identified by the unique identifiers found in either `items.**fulfillmentGroupId**` or `fulfillmentGroups.**id**`.

TIP Fulfillment Groups help you to show the offerings of same type together in the experience, making it easier for the consumer to make their selections.

Get Fulfillment Offerings

✓ Get fulfillment offerings

Let's walk through some use-cases for integrating Fulfillment Offerings into your experience.

Step 1: Show a UI to Select Fulfillment Intent

For the consumer to finalize their decision about how to receive their items, first you need to capture some info about their **intent**.

Intent, in the context of Fulfillment Offerings, is the combination of the desired Fulfillment Type and Location.

[Price offers are for fulfillment groups. Intent vs non-intent offerings: intent will have a price offer reference (priceOfferId), while non-intent offerings do not.]

Search for Offerings Using Consumer Location and Intents

What if you want to get additional offerings to show the consumer, for example, based on their GPS coordinates? What if you already know the consumer's intended fulfillment type for some

items, but not all items?

For this you can optionally send any of the following to Fulfillment Offerings:

- **Location search data** (e.g. GPS coordinates, radius)
- **Known Addresses** (shipping, email or other known addresses for that consumer)
- **Promotion discount codes**
- **Allowed fulfillment types** (e.g. return only 'SHIP' and 'PICKUP' types)

Fulfillment Offerings adjusts the results based on what you send, making for an efficient way to drive the experience.

Step 2: Show a UI to Select a Price Offer

Get Shipping Options (Legacy)

✓ Get shipping options (legacy)

IMPORTANT: The Shipping Options API will be deprecated. New integrators should use Fulfillment Offerings.

Use the [Shipping Options API \(https://developer.nike.com/docs/projects/Shipping%20Options?tab=api#shipping-options-post \)](https://developer.nike.com/docs/projects/Shipping%20Options?tab=api#shipping-options-post) to retrieve the available shipping methods for a consumer's checkout, including any associated costs, estimated delivery dates, or discounts (such as free shipping for members).

To get the shipping options, execute a request to the Shipping Options endpoint.

Sample [Shipping Options API \(https://developer.nike.com/docs/projects/Shipping%20Options?tab=api#shipping-options-post \)](https://developer.nike.com/docs/projects/Shipping%20Options?tab=api#shipping-options-post) request URI:

`https://api.nike.com/buy/shipping_options/v2`

TIPS:

- Although optional, including a `shippingAddress` is recommended whenever possible.
- In China, shipping methods can vary based on the province, city, and district combination.
- For certain countries (e.g. US), including the shipping address can get you an estimated delivery date versus an estimated delivery range.

API Quick Reference

Fulfillment Offerings

- **Request Fulfillment Offerings** (<https://developer.niketech.com/docs/projects/Fulfillment%20Offerings?tab=api>)
- **Retrieve Fulfillment Offerings Job** (<https://developer.niketech.com/docs/projects/Fulfillment%20Offerings?tab=api>)
- **Get Fulfillment Offerings (Cacheable)** (<https://developer.niketech.com/docs/projects/Fulfillment%20Offerings?tab=api>)

Shipping Options

Troubleshooting

Listed below are ways to troubleshoot unexpected responses using this API.

Use Troubleshooting Tools

- Use the general troubleshooting tips in the **Using Nike APIs** (<https://developer.niketech.com/nde-docs/doc/getting-started/using-nike-apis.html#troubleshooting>) guide.
- Use a Splunk query (requires access) to check for issues with your request.
- Contact the Buy team on the **#cic-order-integration** (<https://nikedigital.slack.com/messages/C38BE20SV>) Slack channel for assistance.
