Which API Version Should I Use?

To implement a Nike shopping experience, your app or experience implements one of two fulfillment flows, legacy or omnichannel.

The **legacy** flow allows consumers to choose how quickly all products should be delivered to a shipping address.

The **omnichannel** flow expands the fulfillment options to include ship, digital delivery, and pickup for each item based on consumer location. This gives consumers much more flexibility in how, when, and where they can receive Nike products.

The APIs required for the two fulfillment flows are listed below.

Table 1: Legacy vs. Omnichannel Required APIs
