

Payment Overview

Learn how to use [Payment](#) to manage the purchase process for consumers purchasing Nike products and services.

Nike Payment gives consumers fast and easy ways to pay for purchases with support for popular payment methods across the globe

Nike payment is modular. Although certain payment steps are required, others are optional, and your app can determine the order in which to call them based on your app flow and the payment methods it supports.

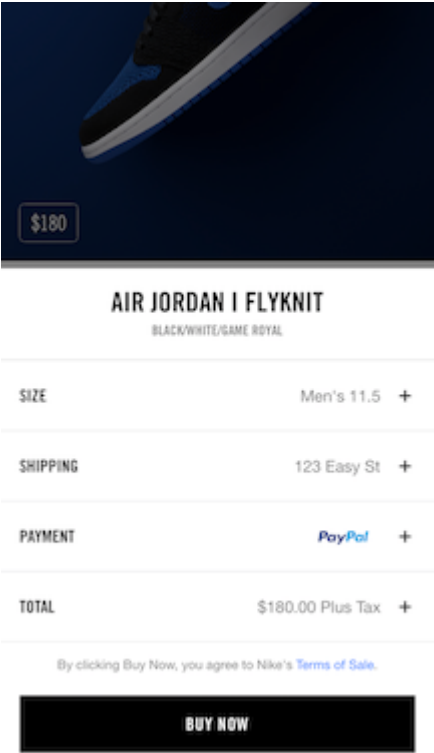

With Nike payment, your app does not need to handle sensitive consumer payment data. Nike payment handles this for you by:

- Utilizing a secure capture mechanism that sends consumer payment information over HTTPS to a separate, PCI-compliant storage compartment
- Masking consumer-sensitive payment sent to the client
- Requiring clients to send a payment-generated ID in order to retrieve payment information rather than an account number or Nike UPMID

Use Cases

Step through the Use Cases below to incorporate Payment capabilities into your experience.

Get available payment options.
Manage a consumer's stored payments.
Allocate amount owed across payment types.
Initiate an Apple Pay transaction.
Initiate a wallet transaction for Paypal Express or PayPal Mark.
Initiate a deferred payment transaction like WeChat.
Initiate a ready payment for Korea payments
Save and validate credit card information. Retrieve masked credit card information.
Perform 3-D Secure authentication
Perform fraud check, validation and authorization/debit for all payment types on a consumer's Checkout.
Send payment notification to debit, credit, void or reauthorize a consumer's payment.
Send third party payment notification to Nike.
