NIKE PARTNERS - ADDING PRODUCT ATTRIBUTES TO YOUR EXPERIENCE

Last Updated: 04/13/2020

Get Nike product attributes like sizes, prices, features, marketing copy and more by using the [Product Attributes API](#).

Introduction

In this guide, we will step through how to use the Product Attributes API to get detailed product data into your app or experience.

This API provides **product data that is segmented by style-color, region, and season**.

Let's say that you have a list of Nike style-color codes, and you want get more details about them for a particular region/season combination. Just execute a cURL command similar to this one:

```
curl --location --request GET 'https://product.api.nike.net/product/v1/USA/SP2020?productCodes=314193-117,654321-101' \
--header 'Authorization: Bearer {your token here}'
```

For each style-color that you send, you will get corresponding attributes, for example:

- Sizes (US, JP, KR, UK)
- Prices (Wholesale, Retail)
- Features (e.g. Reason to Buy)
- Gender
- Silhouette
- Athlete
- Offer Dates

Key Terms

Here are some important terms that are used in this guide.

Table 1: List of Terms Related to Product Attributes

Term	Definition
Product Attributes	The set of metadata for a given Nike product code, e.g. sizes, prices, gender, silhouette.
Product Code	The combined Nike style and color codes, e.g. 654321-101. Also known as style-color code.
Region	The Nike geographical region name associated with the product, e.g. CHINA.
Season	The Nike season year code associated with the product, e.g. SP2020 or FA2021. See Table 4
Silhouette	The overall shape of the product, e.g. SHOE.

Prerequisites

Authentication

Using this API requires following Nike's [Server-to-Server Authentication \(https://developer.niketech.com/nde-docs/doc/partner/authentication/use-partner-auth-s2s.html\)](https://developer.niketech.com/nde-docs/doc/partner/authentication/use-partner-auth-s2s.html) process to obtain an **access token**, which you need for [Step 2](#) of this guide.

Get Product Attributes

✓ Get product attributes for one or more Nike product codes

After completing all the action items in the [Prerequisites](#) section, you are ready to add Nike Product Attributes to your app or experience.

Step 1: Gather the Required Data

The minimum required data you need to construct a valid request is:

- One or more product codes
- Region code
- Season year code

TIP: See the [API Reference](#) for more on which region and season year codes to use.

Step 2: Make the API Request to Product Attributes

If only one product code, call the single endpoint with the product code, region, and season as path parameters:

```
curl --location --request GET 'https://product.api.nike.net/product/v1/AA2148-009/USA/SP2020' \
--header 'Authorization: Bearer {your access token here}'
```

If more than one product code, call the multiple endpoint with the region and season as path parameters, and a comma-separated list of `productCodes` as a query parameter:

```
curl --location --request GET 'https://product.api.nike.net/product/v1/USA/SP2020?productCodes=314193-117,654321-101' \
--header 'Authorization: Bearer {your access token here}'
```

Step 3: Parse the Response

Parse the response body to get the attributes that you need into your app/experience.

TIP: See [API Reference](#) for details of the response body.

API Endpoint Quick Reference

Table 2: Endpoints of the Product Attributes API

Endpoint	Method	URI
Get Product Attributes for a Single Product	GET	https://product.api.nike.net/product/v1/{productCode}/{region}/{season}
Get Product Attributes for Multiple Products	GET	https://product.api.nike.net/products/v1/{region}/{season}

API Reference

Product Attributes

Get Product Attributes for a Single Product

Retrieve product attributes for a single product, when you provide `productCode`, `region`, and `season` as path parameters.

REQUEST

Endpoint

GET `https://product.api.nike.net/product/v1/{productCode}/{region}/{season}`

Request Headers

`Content-Type: application/json`

Path Parameters

The following path parameters are all required in the request URI:

Table 3: Required Path Parameters (Single Product)

Field Name	Description	Example
<code>productCode</code>	Nike product code	AA1837-400
<code>region</code>	Nike region name	CHINA
<code>season</code>	Nike season year code	SP2020

Possible Values for `region`

NIKE PARTNERS - ADDING PRODUCT ATTRIBUTES TO YOUR EXPERIENCE

Possible Values for `season`

An accepted value for `season` is a concatenation of a valid two-digit season code, and a four-digit year number.

First, take one of the possible season codes:

Table 4: Season Codes with Descriptions

Season Code	Description	Date Range
SP	Spring	Jan-Mar
SU	Summer	Apr-Jun
FA	Fall	Jul-Sep
HO	Holiday	Oct-Dec

Then, add the year: `SP` + `2022` = `SP2022`.

Example values for `season` (in no particular sequence):

- `FA2021`
- `HO2022`
- `SP2023`
- etc...

RESPONSE**Response Body**

Table 5: Fields in the API Response

Field	Description	Type	Example
<code>season. year</code>	Season year number (YYYY)	integer	2021
<code>season. name</code>	Season name	string	SPRING
<code>styleColorNumber</code>	Nike style-color code (same as <code>productCode</code>)	string	654321-101
<code>sizeRange</code>	Range of US size	string	7-12, 13, 14, 15
