

ANALYTICS PIPELINE OVERVIEW

Learn how to use [Analytics Pipeline](#), your single destination to record analytics events.

Track consumer and application behavior

Analytics events sent to this API are transformed and sent to multiple downstream systems/partners in real-time, allowing many needs to be fulfilled by sending a single event.

- **Send once, analyze many ways.** One integration can unlock many analytics possibilities.
- **Server-side and Nike-authored.** More customizable to your needs compared to a proprietary, client-side analytics solution
- **Easily add future integrations with other partners.** When additional partners are added, you reap the benefit without the extra work.

Use Cases

Want to know what your users are up to? Step through the Use Cases below to incorporate Analytics Pipeline capabilities into your experience.

[Track the success of marketing campaigns via tags or attribution](#)

[Monitor user traffic and conversion metrics](#)

[Track the success of new features \(A/B testing\)](#)

[Alert on traffic anomalies](#)
